Laboratory Activity: Design the Dashboard

HR & Payroll Dashboard for AIMCooP
(Aurora Integrated Multipurpose Cooperative)

Group Members

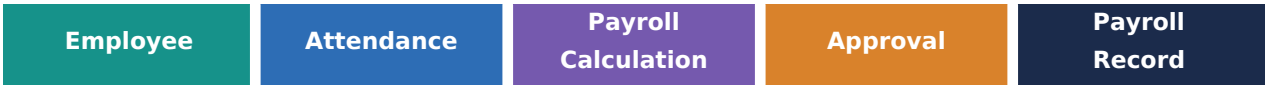

#	Name	Role
1	Crodua, John Brylle	**Group Leader**
2	Calonia, Emae	Member
3	Velez, Francis	Member
4	Arcillas, Joshua	Member
5	Delig, Kent Arville	Member

Item	Details
Group	Crodua's Group
Module	HR & Payroll — manage AIMCooP employees, attendance, and payroll
Deliverable	One dashboard wireframe + short design rationale
Design tool	Figma — HR-and-Payroll (open design)
Date submitted	October 20, 2026

Business Scenario and Target User

Company background. AIMCooP — the Aurora Integrated Multipurpose Cooperative — is a Philippine member-owned savings-and-credit cooperative headquartered at Burgos Street, Poblacion, Aurora, Zamboanga del Sur (CDA Reg. No. 012090030). It publicly reports 1.2 million+ members, PHP 3 billion+ in assets, 83 offices across Luzon, Visayas and Mindanao, and 54 years in service. Besides savings and loans, it runs allied businesses such as funeral services, rice and copra trading. Its public departments are the Marketing Group, Operations Group and Support Group.

Scenario. As part of the proposed AIMCooP ERP (Phase 2 — HR/payroll), the cooperative needs one place to manage its internal employees: profiles, positions, departments, attendance, leave, overtime, payroll, deductions, benefits, performance, and reports. Every semi-monthly cut-off, data from 83 offices must flow through this process:

Each arrow is a hand-off: late attendance or unapproved leave/OT delays the next step.

Target User

Attribute	Description
Role	**HR & Payroll Supervisor** at the AIMCooP Head Office
Responsibilities	Collect attendance from all offices, approve or escalate leave and overtime, run the payroll calculation, and submit the payroll for HR Manager and Finance approval.
Key decisions	Which offices or requests need follow-up before the cut-off locks? Is the payroll within budget? Is the payroll ready to release on time?
Skill level	Comfortable with spreadsheets and HR systems, not a data analyst. Needs plain numbers, clear colors and direct action buttons.
Other views	Branch Managers get the same layout filtered to their own office (role-based access).

02 • GOAL & QUESTIONS

Primary Business Goal and Supporting Questions

Primary business goal

Release an **accurate, on-time payroll** for every AIMCooP employee each cut-off, while keeping attendance, overtime and payroll cost under control across all 83 offices.

Supporting question 1

Which offices or employees have **attendance, leave or overtime exceptions** that could block or delay this cut-off's payroll?

Supporting question 2

Is the **payroll cost (including overtime) within budget**, and which offices or groups are driving any increase?

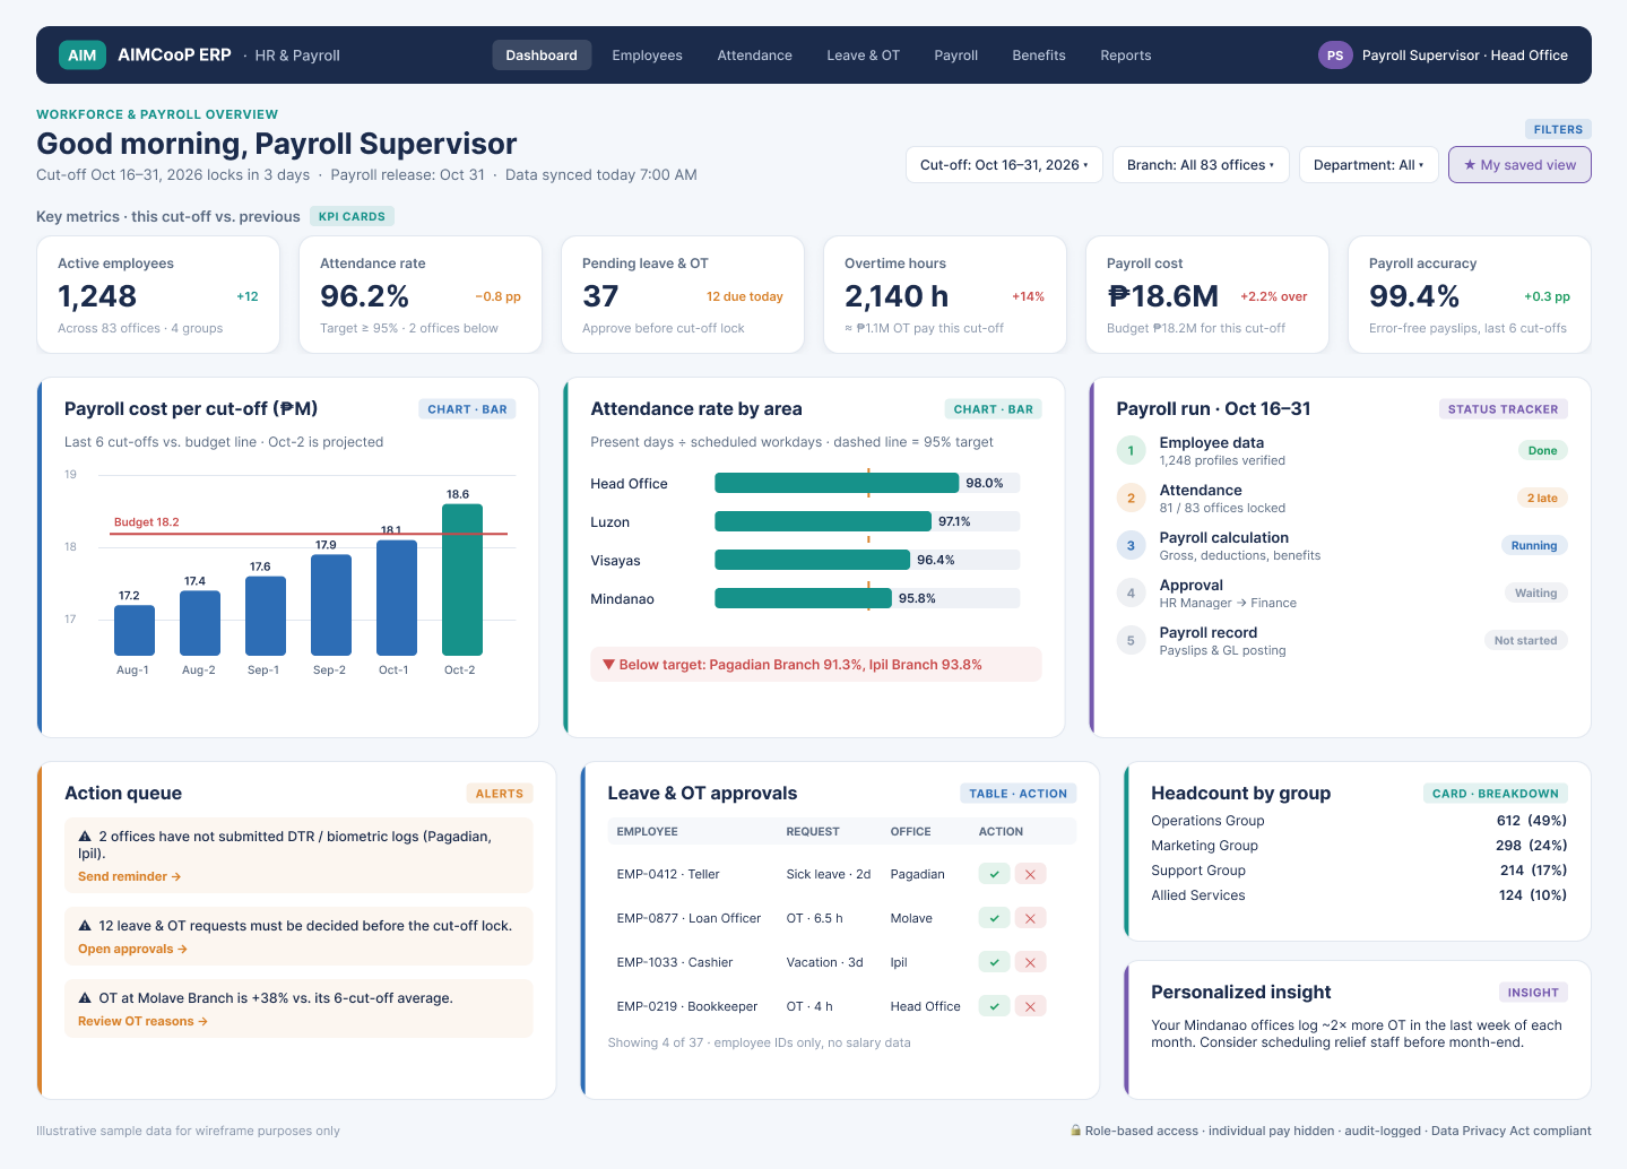

03 • METRICS THAT MATTER

Key Performance Indicators (6 KPIs)

KPI	Definition	Purpose / question it answers	Sample value
Active employees	Number of employees with active status at the end of the cut-off.	Staffing baseline; checks that payroll covers everyone who should be paid.	1,248 (+12)
Attendance rate	Days present ÷ scheduled workdays × 100, per office and overall.	Spots absenteeism and offices with missing logs. Target ≥ 95%.	96.2% (−0.8 pp)
Pending leave & OT	Leave and overtime requests not yet approved or rejected.	Unapproved requests block payroll calculation; shows backlog before the lock.	37 (12 due today)
Overtime hours	Total approved OT hours this cut-off vs. the previous cut-off.	Controls OT cost and shows understaffed offices.	2,140 h (+14%)
Payroll cost	Gross pay + employer contributions + benefits for the cut-off, vs. budget.	Answers "Are we within budget?" (supporting question 2).	₱18.6M (+2.2% over)
Payroll accuracy	Payslips released without correction ÷ total payslips, last 6 cut-offs.	Measures the quality of the process and employee trust.	99.4% (+0.3 pp)

Sample values are illustrative only, used to show how the wireframe works.

HR & Payroll Dashboard — Workforce & Payroll Overview

Designed in Figma: https://www.figma.com/design/98W2liVEuXrOgQs3ZcnDlk/HR-and-Payroll?node-id=3-9

Labelled Layout: Charts, Cards, Filters and Alerts

Area	Element	Type	What it shows / does
Top bar	App bar & module navigation	Navigation	AIMCooP ERP · HR & Payroll with tabs: Dashboard, Employees, Attendance, Leave & OT, Payroll, Benefits, Reports.
Header	Greeting & cut-off countdown	Personalized header	"Good morning, Payroll Supervisor", days until the cut-off locks, payroll release date, and data freshness (synced 7:00 AM).
Header	Cut-off · Branch · Department · ★ My saved view	FILTERS	Change the payroll period, office (1 of 83 or all) and department group; load the user's saved filter set.
Row 1	6 KPI cards	CARDS	Active employees, Attendance rate, Pending leave & OT, Overtime hours, Payroll cost, Payroll accuracy, each with change vs. last cut-off.
Row 2	Payroll cost per cut-off (₱M)	CHART · bar + budget line	Last 6 cut-offs compared with the budget line; latest bar is highlighted as projected.
Row 2	Attendance rate by area	CHART · horizontal bar	Head Office, Luzon, Visayas, Mindanao vs. a 95% target line, with a red callout for offices below target.
Row 2	Payroll run tracker	STATUS TRACKER	Employee → Attendance → Payroll Calculation → Approval → Payroll Record, each with a status (Done, 2 late, Running, Waiting).
Row 3	Action queue	ALERTS	Prioritized warnings (missing DTR, requests due, unusual OT) each with a one-click action link.
Row 3	Leave & OT approvals	TABLE · approve / reject	Requests by employee ID, type, office; approve (✓) or reject (×) inline.
Row 3	Headcount by group	CARD · breakdown	Operations, Marketing, Support Groups and Allied Services, with share of total.
Row 3	Personalized insight	INSIGHT	Pattern detected in the user's own offices, with a suggested next step.
Footer	Privacy & data note	Trust label	Role-based access, individual pay hidden, audit-logged, Data Privacy Act compliance.

05 • PERSONALIZATION

Personalization Features

1. Role-based view

The HR & Payroll Supervisor sees all 83 offices; a Branch Manager signing in sees the same dashboard limited to their office and staff. Each user sees only the data they need.

2. Personalized greeting & cut-off countdown

The header greets the user by role and counts down to their next deadline (cut-off lock, payroll release), so the first thing seen each morning is what is urgent.

3. ★ My saved view (saved filters)

Users save their usual filter set (e.g. "Mindanao offices · Operations Group") and open it in one click, without rebuilding filters each time.

4. Personalized insights & alerts

Alerts and the insight card are generated from the user's own offices (e.g. "Your Mindanao offices log ~2× more OT in the last week of the month") and recommend a next step.

06 • ACTIONABILITY

Metric → Action: What the User Should Do

Metric	Trigger / condition	Action the user should take
Attendance rate	An office falls below the 95% target, or an office has not submitted DTR / biometric logs.	Click **Send reminder** to the Branch Manager, verify the logs, and lock attendance before the cut-off so payroll is not delayed.
Pending leave & OT	Requests are still pending within 2 days of the cut-off lock.	Open the approvals table and **approve or reject** each request; escalate to the department head if a request lacks support.
Overtime hours / Payroll cost	OT rises more than 10% vs. the previous cut-off, or payroll cost exceeds budget.	Click **Review OT reasons**, check the office's staffing, and flag the variance to Finance before approval.

Short Design Rationale

- **Decision first, then metrics.** Every element supports one decision: can this cut-off's payroll be released accurately and on time? KPIs that do not inform an action (e.g. total employees hired all-time) were left out.
- **10-second scan.** The top-left greeting and countdown show urgency; the KPI row gives the status; color (teal = good, orange = needs attention, red = problem) shows where to look.
- **Right chart for the job.** Cards for totals, vertical bars for cost over cut-offs with a budget line, horizontal bars to compare areas against a target, and a step tracker for the payroll workflow.
- **Action next to insight.** Alerts carry action links and the approval table has inline approve/reject, so the user can act without leaving the dashboard.
- **Privacy by design.** The overview shows only aggregated pay figures, the approval table uses employee IDs and positions instead of salaries, access is role-based and audit-logged, in line with the Philippine Data Privacy Act.

Share-out: One Design Choice and One Trade-off

Design choice

We placed the **Payroll run tracker** (Employee → Attendance → Payroll Calculation → Approval → Payroll Record) on the main screen, because the supervisor's biggest risk is a late step blocking the whole payroll. Seeing "Attendance: 2 late" tells them exactly where to act.

Trade-off

To keep a one-screen overview and protect privacy, we show **only aggregated figures and the top 4 pending requests**, not individual payslips or the full request list. The supervisor needs one more click (Payroll or Leave & OT tab) for detail, but the dashboard stays fast to read and safe to show on screen.

Dashboard Design Checklist (self-check)

Criterion	Question	How our design meets it
User fit	Designed for a clearly named role?	Yes, the HR & Payroll Supervisor (Branch Manager view via roles).
Goal alignment	Every KPI connects to an objective?	All 6 KPIs relate to on-time, accurate, within-budget payroll.
Visual clarity	Priorities visible in 10 seconds?	Countdown, colored KPI deltas, alert panel.
Actionability	Alerts suggest a next step?	Every alert has an action link; approvals are inline.
Personalization	Filters, segments, recommendations relevant?	Role view, saved view, countdown, insight.
Trust & privacy	Definitions, freshness, access, privacy?	KPI definitions, sync time, role-based access, no salaries shown.
